Reflecting on 2018
Dr. James Nickman Shares Perspective on His Time as AAPD President
We’re heading to Hawaii!

Join us at the AAPD Annual Session in Honolulu at booth 825.

IDS is proud to officially present VIVARRA, the newest and most effective way to reduce patient anxiety and market your practice.

Come to booth 825 to learn more.
OUR ROOTS RUN DEEP IN PEDIATRIC DENTISTRY

Welcome three new members to our family.

SSC Cuspids

Zirconia Narrow 2nd Primary Molars

BioCem - NOW AVAILABLE in two shades. Provides color adjustments to zirconia crowns.

NuSmile is proud to be an AAPD Strategic Partner
Greetings from the hard water state of Minnesota! The season change is in full swing and the outdoors are in a process of renewal. It always amazes me when the sun finally feels warm and goes about its job of melting snow and making plants grow.

Personally, this time of year always brings about a sense of personal renewal. I’ve just returned from our 2018 AAPD Public Policy Advocacy Conference in Washington, D.C. Old friendships are rekindled, and new friends are made. This year’s million-dollar moment was meeting our future practitioners and watching them in action on the Hill. At this year’s conference, approximately 180 residents attended the meeting to learn about advocating for pediatric health. It was fun to watch them eagerly soak in the knowledge and immediately put it to use. Even our nervous colleagues rapidly assimilated the information and after several rounds of practice, were able to confidently make a coherent persuasive presentation on why issue “X” or “Y” were important to how we provide care to our nation’s children. The best return on the AAPD’s investment is that these individuals will return home and utilize those skills in their communities and state.

The key issues this year were related to Title VII, repeal of McCarran-Ferguson Act for health plans, and student debt. This year, the AAPD requested the continued funding of 12 million dollars devoted to pediatric dentistry training programs. We have made great use of those dollars in the past, increasing the number of pediatric dentists working with our nation’s children. Two million of the 12 million requested, is directed by HRSA through a competitive grant process to full-time pediatric dental faculty to be used with dental faculty loan repayment. As academic salaries are approximately a third of full time private practice, these monies are key in recruiting and retaining our future educators. Not only are these key educators training our future pediatric dental specialists, they are training our general dental partners to provide appropriate care.

I would like to thank Dr. Heber Simmons and the past leaders and staff of the AAPD for creating this opportunity. The wisdom of the group has transformed our legislative advocacy group into a significant trusted presence on the Hill. It is usually an easy ask as the children that we have the honor of treating directly benefit from our efforts. We also have created a small army of public policy advocates that carry our messages at a state level and act as a trip-wire to bring issues from their states to a national level that impact the patients we serve. If you are not currently involved, please get involved with your state and district pediatric dental associations. Please also stay involved with your state dental associations as it is key that they understand how children may be impacted by changes at a state level.

We have a tremendous annual session planned in Hawaii this May. This will be a celebration of Ohana which is a Hawaiian term for family. In addition to our families at home, we have a great professional family. Although we may not always agree, our common bond is advancing pediatric oral health and providing safe, compassionate care for our families. Lynn Fujimoto, the local arrangements chairperson, and the Scientific Program committee have assembled a great program starting with a tremendous preconference course and Welcome Reception and finishing with time on the beach. Thank you for the honor to serve as your president this year. This has been a tremendous opportunity to meet with our members, stakeholders and other partners to advance our mission. I have truly enjoyed meeting new friends and being able to talk about common issues impacting our future. If I can ever be of service to you, please feel free to contact me at james.nickman@comcast.net.

Mahalo!
Legislative and Regulatory Update

Unless otherwise noted, for further information on any of these issues please contact Chief Operating Officer and General Counsel C. Scott Litch at (312) 337-2169 or slitch@aapd.org.

PUBLIC POLICY ADVOCACY CONFERENCE (PPAC) IN WASHINGTON, D.C. MAKES AN IMPACT ON KEY ISSUES

On March 5-7, 2018, nearly 300 AAPD members from 36 states and D.C., advocated for children’s oral health in Washington, D.C., by visiting with their members of Congress. AAPD attendees included members of the Council on Government Affairs, PAC Steering Committee, Executive Committee, and Budget and Finance Committee. Twenty-nine AAPD state Public Policy Advocates participated as well. Thirty-six pediatric dentistry residency programs were represented, with more than 175 residents in attendance. For the third year, the AAPD held a special pre-conference advocacy orientation and training session for residents.

Attendees heard updates on key AAPD public policy issues focusing on Title VII pediatric dentistry funding and student loan repayment reform legislation, as well as an update from the ADA on the Affordable Care Act, Medicaid, and CHIP. The keynote speaker was Michael Barone, currently Senior Political Analyst for The Washington Examiner, Resident Fellow at the American Enterprise Institute, and contributor to Fox News. Mr. Barone discussed the current political landscape and the upcoming 2018 Congressional mid-term elections.

The AAPD PAC hosted a fundraiser for Congressman Tom Cole (R-Okla.-4th), chair of the House Appropriations Subcommittee on Labor, Health and Human Services, and Education. Mr. Cole is a fifth generation Oklahoman and an enrolled member of the Chickasaw Nation. He is one of only two tribal members currently serving in Congress. The event, co-sponsored with ADPAC, AAOMS PAC and Hogan Lovells PAC, raised over $15,000.

The specific advocacy requests made by attendees during Capitol Hill visits were:

- **Fund Title VII Pediatric Dentistry**
  Provide FY 2019 funding of $40.763 million for the primary care dental Title VII program with $12 million for Title VII Pediatric Dentistry that includes funding for the Dental Faculty Loan Repayment Program. As part of this effort, attendees urged House Members to sign onto a Dear Colleague letter circulated by Congresswoman Julia Brownley (D-Calif.-26th) and Congressman Gregg Harper (R-Miss.-3rd) that asked Members to Support Bipartisan Call for Investment in Pediatric Dental Care. The final letter included 38 signatures and will be printed in the July 2018 PDT.
• Make dental faculty loan repayments non-taxable to recipient or allow institutions to offset tax liability. Dental faculty loan repayment program would have even greater impact if made non-taxable to recipient or if institutions were allowed to use grant funds to offset tax liability.

• Support H.R. 372, repeal of antitrust exemption for health insurance companies.
  H.R. 372, repeal of the McCarran-Ferguson Act, was approved by the House on March 22, 2017. A Senate bill has yet to be introduced.

• Support H.R. 4001, student loan refinancing and restoration act.
  H.R. 4001 would:
  • Allow borrowers to refinance their student loan interest rates to the 10-year Treasury note rate, plus one percent, throughout the lifetime of the loan.
  • Eliminate origination fees and instead set future student loan interest rates at the 10-year Treasury note rate, plus one percent.
  • Delay student loan interest rate accrual for many low- and middle-income borrowers while they are in school.
  • Allow for borrowers in medical or dental residencies to defer payments until the completion of their programs.

Fact sheets used in Congressional visits are available on the AAPD website at http://www.aapd.org/advocacy/legislative_and_regulatory_fact_sheets/.

We sincerely thank all those members who took time from their busy schedules to attend this important conference. Many thanks to the state and district chapters which help support residents’ attendance at the conference.

CHIP REAUTHORIZED FOR 10 YEARS

The March 2018 PDT described advocacy efforts to reauthorize the Children’s Health Insurance Program (CHIP), which plays a critical role in the coverage landscape for children. Together, CHIP and Medicaid provide health care coverage to more than 36 million children. Medicaid provides coverage for over 30 million children, and CHIP builds on that foundation to provide coverage for over 6 million children who are not eligible for Medicaid, but lack access to affordable health coverage. Although funding lapsed on Sept. 30, 2017, Congress acted on Jan. 22, 2018, to pass a six-year CHIP extension, and again on Feb. 9, 2018 to extend CHIP for an additional four years through FY 2027. During PPAC Congressional visits, AAPD attendees thanked all Senators and Representatives for their support of CHIP reauthorization.

CHIP Background: CHIP was created in 1997 with strong bipartisan support to provide coverage for children who fell above Medicaid eligibility levels but lacked access to other options. CHIP was specifically designed to include child appropriate benefits, access to pediatric providers, and cost-sharing limits to protect children and families. States that provide CHIP coverage to children through a Medicaid expansion program are required to provide the EPSDT benefit, which includes dental coverage. Dental coverage in separate CHIP programs is required to include coverage for dental services “necessary to prevent disease and promote oral health, restore oral structures to health and function, and treat emergency conditions.” States with a separate CHIP program may choose from two options for providing dental coverage: a package of dental benefits that meets the CHIP requirements, or a benchmark dental benefit package. The benchmark dental package must be substantially equal to: (1) the most popular federal employee dental plan for dependents; (2) the most popular plan selected for dependents in the state’s employee dental plan; or (3) dental coverage offered through the most popular commercial insurer in the state.

CHIP is one of the reasons that 90 percent of children in the U.S. currently have dental insurance coverage.

This year’s Public Policy Advocacy Conference had 293 attendees, including 178 residents from 36 programs.
### 2017 AAPD PAC Contributions

In calendar year 2017, 1,058 members contributed $229,742

(*PAC Steering Committee and Advisory Board Members, members of AAPD, HSHC, and ABPD Boards, State Public Policy Advocates, and AAPD staff)

I think our members will appreciate that the AAPD and its state chapters are committed to promoting reasonable state dental board regulation of specialty advertising announcements. In that vein, a recent joint letter submitted to the Washington State Dental Quality Assurance Commission is a good example of these efforts. I think the issues raised in the letter are self-explanatory.

March 2, 2018

Dear Ms. Santiago:

The Washington State Academy of Pediatric Dentistry (WSAPD) and the American Academy of Pediatric Dentistry (AAPD) are writing to comment on proposed changes to the Washington Administrative Code (WAC) by the Dental Quality Assurance Commission (DQAC). WSAPD is the state organization which represents the dental specialty of pediatric dentistry and is the state chapter of the AAPD. The AAPD is the leading national advocate dedicated exclusively to children’s oral health and representing the specialty of pediatric dentistry.1

DQAC is considering an amendment to the following regulation:

“WAC 246-817-420

Specialty representation.

(1) It shall be misleading, deceptive or improper conduct for a dentist to represent or imply that he/she is a specialist or use any of the terms to designate a dental specialty such as:

(a) Endodontist
(b) Oral or maxillofacial surgeon
(c) Oral pathologist
(d) Orthodontist
(e) Pediatric dentist
(f) Periodontist
(g) Prosthodontist
(h) Public health

or any derivation of these specialties unless he/she is entitled to such specialty designation under the guidelines or requirements for specialties approved by the Commission on Dental Accreditation and the Council on Dental Education of the American Dental Association, or such guidelines or requirements as subsequently amended and approved by the DQAC, or other such organization recognized by the DQAC.

(2) A dentist not currently entitled to such specialty designation shall not represent that his/her practice is limited to providing services in a specialty area without clearly disclosing in the representation that he/she is a general dentist. A specialist who represents services in areas other than his/her specialty is considered a general dentist.”

[Statutory Authority: RCW 18.32.035. WSR 95-21-041, § 246-817-420, filed 10/10/95, effective 11/10/95.]

Per the November 17, 2017 filing, DQAC is considering an amendment to recognize disciplines approved by the American Board of Dental Specialties.

We would like to provide a little background about the specialty of pediatric dentistry.

Pediatric dentists are the pediatricians of dentistry. The specialty of pediatric dentistry is an age-defined specialty that provides both primary and comprehensive preventive and therapeutic oral health care for infants and children through adolescence, including those with special health care needs. This includes but is not limited to: the management of the growth and development of the jaws and teeth of children; counselling and primary dental care; dental disease management and treatment; comprehensive advanced behavior management techniques including proper administering of local anesthesia, inhalation sedation and proper in office sedation or hospital dentistry. These are just a few of the specialty techniques that are taught in our specialty residency training programs.

In order to become a specialist in pediatric dentistry, an additional two to three years of advanced residency training is required following graduation from dental school. As a result of this additional training, pediatric dentists are uniquely qualified to be the primary and specialty oral care providers for infants and children through adolescence, including those with special health needs. Pediatric dentists are also eligible to become board certified and Diplomates of the American Board of Pediatric Dentistry (the specialty certifying board of Pediatric Dentistry). This requires a pediatric dentist to have credentials verified while successfully completing voluntary examinations and re-certification. Currently 75 percent of all pediatric dentists in the U.S. are board certified.
Proper techniques are important as they aid in achieving positive dental outcomes and experiences for a child. We believe the establishment of trust and a positive attitude towards dental health and their future dental well-being and care is important. Pediatric dentistry Best Practices and Clinical Guidelines have been established and are constantly reviewed and updated by the AAPD so that the practice of pediatric dentistry is effective, safe, and evidence-based.

Therefore, we believe that the children and families of Washington deserve to know whether a pediatric dentist specialist is their dental provider, and this should be clearly distinguishable in advertisements from services provided by a general dentist. It is in the very best interest and safety for the public to continue to acknowledge the ADA recognized specialty of pediatric dentistry. It is critical for the DQAC to continue to protect the public from any misinformation and confusing advertising. This is especially important because pediatric dentistry is the only age-defined dental specialty. Because of this fact, we believe it is inappropriate and unethical for a non-pediatric dentist to advertise with terms such as “Children’s Dentistry” or “General Dentistry practice limited to pediatric dentistry” or “General Dentist” with emphasis on pediatric dentistry. We urge that specific language to this effect be included under WAC 246-817-420 (e), to further strengthen this provision. Trust is essential to the provider and patient relationship. It is imperative to aid the public in discerning the difference between general dentists who provide dental services for children versus a pediatric dentist. Ethical regulations for advertising the specialty of pediatric dentistry should also include social media, as well as print advertising.

As for consideration of additional “specialties”, at the very minimum the DQAC should not allow any dentist to advertise as a specialist without completing a Commission on Dental Accreditation (CODA)-accredited post-doctoral residency.

To do otherwise would be inconsistent with protection of the public. CODA is nationally recognized by the United States Department of Education (USDE) as the sole agency to accredit dental and dental-related education programs conducted at the postsecondary level. CODA's mission is to “serve the public and profession by developing and implementing accreditation standards that promote and monitor the continuous quality and improvement of dental education programs.” CODA accomplishes this through a rigorous process of stakeholder engagement and peer review.

While 3 of the 4 specialties recognized by the American Board of Dental Specialties do require completion of a CODA post-doctoral residency, the American Association of Implant Dentistry (AAID) does not require completion of a CODA program. Also, it should be noted that with creation of the new National Commission on Recognition of Dental Specialties and Certifying Boards, nothing would preclude the disciplines currently recognized by ABDS to apply for dental specialty recognition before this commission.

As a final point, we urge the DQAC not to over-react in haste to the case of American Academy of Implant Dentistry v. Parker. That decision upheld a district court decision that the state board could not restrict advertising as a dental specialist to only ADA-recognized specialties. The court believed the board had failed to demonstrate harm it was trying to prevent. However, the court went on to say that:

“We do not suggest that the Board may not impose appropriate restrictions in the area of dental specialist advertising. The plaintiffs agree that advertising as a specialist is potentially misleading and that reasonable regulation is appropriate. We hold only that the Board has not met its burden on the record before us to demonstrate that Section 108.54, as applied to these plaintiffs, satisfies Central Hudson's test for regulation of commercial speech.”

Therefore, the current language under WAC 246-817-420 should be retained and strengthened in subparagraph (e) related to pediatric dentistry as recommended in these comments.

The WSAPD and AAPD would be pleased to respond to any questions or comments from the DQAC concerning these comments. Thank you for this opportunity to voice our opinions on this matter.

Sincerely,

Dr. Patricia Benton
President
Washington State Academy of Pediatric Dentistry

Dr. James D. Nickman
President
American Academy of Pediatric Dentistry

cc: C. Scott Litch, AAPD Chief Operating Officer and General Counsel

1 The American Academy of Pediatric Dentistry (AAPD) is the recognized authority on children’s oral health. As advocates for children’s oral health, the AAPD promotes evidence-based policies and clinical guidelines; educates and informs policymakers, parents and guardians, and other health care professionals; fosters research; and provides continuing professional education for pediatric dentists and general dentists who treat children. Founded in 1947, the AAPD is a not-for-profit professional membership association representing the specialty of pediatric dentistry. Its 10,000 members provide primary care and comprehensive dental specialty treatments for infants, children, adolescents and individuals with special health care needs.

2 No. 16-50157 (5th Cir. 2017), U.S. Court of Appeals for the Fifth Circuit decision of June 19, 2017.

Dentistry. Simplified.
The All-in-One Autoclavable Isolation System

An intelligent breakthrough in isolation, DryShield lets you focus on what you do best: provide quality dentistry and the ideal patient experience.

DryShield® fits seamlessly into your pediatric workflow

1. Place long-lasting sealants predictably
2. Perform 2-quadrant dentistry efficiently
3. Protect young patients’ tongues and cheeks without stress
4. Ensure comfort with flexible mouthpieces and interchangeable bite blocks - for the perfect patient experience
PRACTICE TRANSITIONS & CAREER OPPORTUNITIES

Don’t go gray over running your own Practice.

COME SEE US IN THE TECH BAR (BOOTH #333) ON MAY 24-27, 2018

EXCLUSIVELY PEDIATRIC DENTISTRY & ORTHODONTICS

Smiles for Life Tech Bar is Back
Returning by popular demand, the Tech Bar provides an opportunity to get help with your online reputation, learn how to utilize productivity apps, attend a Tech Session and MORE. Be sure to visit the Tech Bar in the Exhibit Hall!

*Sponsored by Smiles for Life Network*

Exhibit Breaks
Maximize your 20 minute session breaks in the Exhibit Hall with nearly 200 exhibitors!

Enhanced Instagram Station
You’ll do more than just snap, tag and print this year at #aapd2018. Be a part of AAPD history by helping to create the AAPD Mosaic. Stop by the AAPD Booth to check it out! Take a photo from anywhere at the meeting. Then, post it to Instagram or Twitter and add the hashtag #aapd2018. Your photo can be printed from the Hashtag Printer located in the AAPD Booth. Your photo can be a part of the AAPD Mosaic which will be displayed in AAPD Headquarters Office in Chicago, IL.

AAPD 2018 Mentor Program
The AAPD Mentor Program has officially become a staple at Annual Session! With registration numbers sky-rocketing, the Mentor Program is bound to be a successful program yet again. Residents, new dentists and seasoned professionals are all invited to participate in Honolulu.

**Your AAPD 2018 Checklist**
- Register for AAPD 2018
- Register office staff and family for AAPD 2018
- Download the conference app
- Sign up for the Preconference Course

**What Does Your AAPD 2018 Schedule Look Like?**
Did you know you can create your very own personalized Annual Session schedule in both the app and Online Itinerary Planner? The accounts are linked, so you can prepare for the meeting and star sessions or events you’d like to attend.
Preconference Course

Full Steam Ahead or Off the Tracks? Which Way is Your Engine Headed in Both Your Life and Dental Practice?

THURSDAY, MAY 24
8:30 AM – 2:30 PM

Are you struggling with work/life balance? Is work just work? Do you feel your train is going too fast or headed in the wrong direction? Then join us in the paradise of Hawaii to experience transformation while learning how to love what you do, have fun at work and home, and most importantly, enjoy the ride!!

Upon completion of this course, you will be able to:

• Identify your passion statement and discuss what makes your heart sing.
• Identify situations or obstacles that interfere with moving forward toward your passion and foundation purpose goal.
• Increase efficiency at work and happiness at home by balancing your work and life habits.

Opening Ceremony & Keynote Address

Kevin Wanzer
FRIDAY, MAY 25
7:30 – 9 AM

At his lemonade stand when he was just eight years old, Kevin Wanzer offered passersby two types of refreshment: a cold cup of lemonade and hilarious, dead-on stand-up renditions of Steve Martin comedy routines. Decades later, the lemonade and Martin routines are gone. The refreshment, however, is still to be had. As a humorist, motivational comedian and keynote speaker, Wanzer has been earning rave reviews for over thirty years. Inspiring and entertaining audiences in refreshing ways is all he has ever known. He has been noted nationally as one of the most effective and entertaining speakers for inspiring and empowering audiences, celebrating Ohana and the Spirit of Aloha. Through stories and humor, he helps people reconnect with hidden passions, embrace diversity, and celebrate community through laughter.

Early in his career, Wanzer served on the staff of and appeared on Late Night with David Letterman. As a result of his early work with First Lady Nancy Reagan, President Ronald Reagan appointed him to serve as a delegate to the White House Conference for a Drug Free America, on behalf of which he spoke at the United Nations. To this day, Wanzer is still one of the youngest presidential appointees in American history.

Please come honor the Pediatric Dentist of the Year during the awards portion of the morning. And celebrate the spirit of Hawaii with a unique opening.

Wristbands for the Welcome Reception

Going to the Welcome Reception but don’t have time to pick up your wristbands at the Convention Center? Don’t worry, we have you covered. Stop by the Rainbow Suite at the Hilton Hawaiian Village on Friday between 4:30 p.m. – 7:30 p.m., to pick up your wristbands. You must have your wristband in order to board the bus to the Welcome Reception. Bring your confirmation email with you showing proof of purchase.

*This site will be for Welcome Reception wristband pickup only.
**Misplaced/lost wristbands may have to be re-purchased.

Management & Clinical Software Designed Specifically for Pediatric and Orthodontic Practices

“Our parents are in their late 20’s and early 30's. They expect their dentists to have the best of what the profession has to offer; the best dental equipment, state-of-the-art computers… DOX|Pedo and the support at KSB ‘fits’ with my philosophy of doing business. The clinical component has changed everything. It is a whole different mindset - paper to computer. It’s great.”

Q. As AAPD President, your agenda has focused on implementation of the Safety Task Force and Work Force studies, as well as advocating for access to and utilization of care for underserved and special health care needs populations. Can you please share how each of these goals has been accomplished?

A. The issue of safety is priority number one. As the task force moved forward, it became quickly clear that safety was related to more than waterlines and sedation. It involves everything impacting our offices from patient information, office/workforce safety and procedures that we do. We must do everything we can to protect our most valuable resource – the children that we have the honor of treating.

Regarding workforce, it took time for us to determine where we needed to be as a profession in the future. We contracted with the Center for Workforce Studies at the University at Albany, State University of New York, to look at our existing workforce and practice models and predict where the position needs to be until 2030. The survey has been completed and the analysis phase is in process. The AAPD is planning to publish initial results in a peer-reviewed journal later this year. Preliminary data shows that it is likely more of a distribution issue than training too many pediatric dentists. Complicating the distribution are the high number of two career families and the higher debt loads of our newer members entering the workforce.

Special health care needs and underserved populations have a special place in my heart. Low socioeconomic children and their families sometimes struggle to access care and function day-to-day. For families with special health care needs children, dentistry can sometimes take a lower priority due to their child’s medical concerns. Prevention and regular dental care are extremely important in the overall health of both patient bases which helps minimize time out of school, work, and the potential for pain due to dental infections. I am very proud of the high number of these special children that our members see and treat. AAPD has been involved with the potential health care reform proposals, CHIP renewal, and actively advocates on federal and state levels to make sure that the programs are working as intended.

Q. Are there achievements/milestones of AAPD under your leadership of which you’re most proud?

A. I am proudest of our efforts in safety and the progress that the Safety Task Force has made. Although there has not been a lot of the work product released, there are exciting programs for our members in the works. These include offering our members who perform in-office sedation and general anesthesia an option to undergo an inspection by an independent third-party organization, like the Joint Commission. As an organization, we have also engaged our sister specialties and other regulatory organizations and strategic partners to make sure the standards of care remain high.

Q. You have been key in promoting our Monster-Free Mouths campaign this year. From your viewpoint, how was it meeting with Reuter’s Health, Parents and Family Circle Magazine among other consumer publications in November 2017? What message in your opinion were they most receptive to?

A. We have a fabulous media department within the AAPD and Weber Shandwick that have created opportunities to distribute our message. In addition to the Age One Dental Visit and Dental Home messages, all were very interested in the AAPD’s recently released Evidence-Based Guideline on Silver Diamine Fluoride (SDF). While not the final fix, SDF enables pediatric dentists to offer families one more choice regarding care decisions for their child. This product has the potential to be a paradigm shift in the care provided to very young children and special healthcare needs individuals. At a minimum, it may allow us to delay treatment until the young child is able to cope with dental treatment in a normal clinic setting.
Q. How would you recommend addressing the faculty shortage issue?

A. Faculty shortages are an extremely tough issue for our profession. The key is to recruit and retain these individuals at an early point in their career. From my conversations with residents, it is not uncommon for some to have extremely high debt loads ($400K and more). This can be a tremendous barrier for a practitioner interested in education, as starting salaries in academia are approximately a third of what they can make in private practice. The AAPD has continued to advocate for the Health Services and Resource Administration (HRSA) Dental Faculty Loan repayment program. The program allows the fulltime faculty to retire their educational debt over a five-year period. This past year, 10 grants were issued to our training programs. If we can continue this effort for another several cycles, we will have made a tremendous impact in the workforce training our next generation of pediatric specialists and our general dentist partners.

Q. You participated in a national Satellite Media Tour as part of our media outreach for National Children’s Dental Health Month. Can you please share insight into this experience?

A. This was one of the best experiences of my year. I want to thank Erika Hoeft, Robin Wright and our partners at Weber Shandwick for preparing me for the day. We arrived at a media production company in Chicago at about 5:30 a.m., and over the course of the next six hours, conducted 28 television and radio interviews promoting the Age One dental visit and Dental Home messages. I was also able to promote the recently released silver diamine EBD guideline and provide care tips for new parents. I now have a much better appreciation for folks who do this on a regular basis.

Q. In your opinion, how can dental professionals do a better job of reaching parents and educating them on the importance of a Dental Home and Age One dental visit?

A. It never fails to amaze me when a new parent comes into the office and is unaware of our Age One dental visit and Dental Home messages. It really breaks my heart when a 16-month-old infant presents with Early Childhood Caries and knowing it could have been prevented or minimized by early intervention. I think all parents want their child to have a great start in life and have tried to do the right thing both medically and dentally. We need to continue to reach out to pediatricians and general dental colleagues to educate and reinforce the importance of both efforts in disease prevention. The pediatricians are likely the most important targets as they are connecting with these children and families multiple times in the first year of life. I would also encourage pediatric dentists to be partners with early childhood programs (Early Childhood Family Education, prenatal classes, etc.) where they can make connections with new or future parents.

Q. Late last year we introduced our first Evidence-Based Guideline on Silver Diamine Fluoride which generated a lot of media attention. Why do you think it was so embraced by the media?

A. The release of the AAPD’s evidenced based silver diamine guideline could be a significant paradigm shift in the dental care strategies for very young and special health care needs patients. I think that the media was most impressed that it is a relatively quick, painless procedure that can be performed to allow us to halt the decay process and buy time to allow the child to grow and mature. For special health care needs patients, it may buy us time to halt a crisis and treat in an appropriate setting. Although not definitive treatment and not appropriate for all children, it is one more discussion that we can have with families on the care of their children.

Q. Are there other pediatric dentistry topics/trends that you are aware of that the Academy is following? What is the next Evidence-Based Guideline to be issued by AAPD?

A. I am very proud of our Evidenced Based Dentistry (EBD) Workgroup and the talent and dedication of this team. We now have three EBD guidelines in our reference manual, two of which were created internally for vital pulp treatment and silver diamine fluoride. Our next guideline in the works will be for non-vital pulp therapy, followed by behavior guidance. The EBD process is very time consuming and only utilizes published research that meets its stringent criteria. It is great to be in the driver’s seat defining the best treatment with science for our members, strategic partners and other stakeholders, such as dental licensing boards.

Q. Tell us about the shifting characteristics/demographics of AAPD’s membership.

A. I am very excited about the transformation of the AAPD over 75 years of our existence. We are now the third largest specialty, trailing orthodontics and oral surgery. We are a young profession with 67 percent of our membership under the age of 50 and 44 percent under the age of 40. I am tremendously proud that we are now a majority female organization — this trend will likely continue as 64 percent percent of our residents are female. Currently, approximately 94 percent of educationally qualified pediatric dentists in the United States choose to be members of the AAPD. This speaks well of how nimble our organization is and how we strive to meet member needs.

Q. Anything else you would like to add?

A. I am thankful for having the opportunity to represent you as our president this year. It is very humbling to work with our talented members and staff to meet our member needs and advocate for pediatric oral health. We have an incredible Ohana (Family) that puts children first in all that they do. If I could make one request, it would be for everyone to stay involved and engaged with their Academy.
Welcome New Members

The AAPD would like to welcome new members. We look forward to supporting your professional needs. For further information on membership benefits please contact Membership Department at (312) 337-2169 or membership@aapd.org.

Member Benefit Spotlight

The Dental Trauma Guide – Evidence-Based Treatment Guide

In 2005, researchers at the University Hospital of Copenhagen started the Dental Trauma Guide to capitalize on an extensive dental trauma injuries database they had collected. The extensive catalog of trauma data is used to produce prognosis estimates for different injuries, and allows comparison of competing treatments.

Due to a loss of funding the Dental Trauma Guide is now a membership-based website. For AAPD members, the fee (normally $25 per year) is a nominal $7 per user per year.

To subscribe:

- Go to https://dentaltraumaguide.org/membership-aapd-7123647361/
- Select the number of individual users that need to have access to the Dental Trauma Guide
- You now have access to the unique services of the Dental Trauma Guide.

AAPD New Fellows

AAPD would like to congratulate the new AAPD Fellows. The AAPD Fellow program recognizes members who fulfilled requirements of leadership, scholarly activity and community involvement.

Did You Know

There are over 20 member benefits listed on the AAPD website. Find out all of your member benefits at http://www.aapd.org/join/benefits/. AAPD membership not only enhances your dental career through continuing education courses and colleague interaction, but also puts you at the forefront of the pediatric dentistry specialty through publications, advocacy, involvement and children’s oral health resources.
Sleep is Silent, Not Symphonic

Anthony Burgess was right when he said: “Laugh and the world laughs with you, snore and you sleep alone.” Sleep is meant to be silent, not symphonic.

The scientific investigation of sleep began in the 1930s when Hans Berger, who discovered electroencephalography (EEG), noticed spontaneous brain activity in sleeping patients. Nearly five decades later (1978) the American Board of Sleep Medicine (ABSM) began certifying medical practitioners in sleep disorder medicine and interpretation of polysomnograms. This tailwind of interest in sleep medicine has led to the exploration of pediatric and adolescent sleep disorders such as sudden infant death syndrome (SIDS) and obstructive sleep apnea and sparked attention to behavioral and learning difficulties in children.

Pediatric sleep disordered breathing (SDB) is an umbrella term that includes breathing disturbances such as habitual snoring, obstructive sleep apnea (OSA), and nocturnal hypoventilation. The prevalence of SDB varies widely among studies depending on the diagnostic criteria used. According to Dozier et al., approximately 25 percent of typically-developing, preschool-aged children have sleep related problems, whereas the prevalence of sleep disorders in children with neurodevelopmental disorders can be as high as 80 percent. The prevalence of OSA specifically is between one percent to five percent with onset between two to eight years of age.

As clinicians, we have an opportunity to catch early warning signs of sleep disturbances in children through clinical dentofacial examination. Common clinical findings associated with SDB include obesity, adenotonsillar hypertrophy, macroglossia, retrognathia, and high-arched palate. In addition, children with disorders such as Down Syndrome, Prader-Willi syndrome, and Pierre-Robin sequence have high-arched palate. In addition, children with disorders such as Down Syndrome, Prader-Willi syndrome, and Pierre-Robin sequence have craniofacial abnormalities that predispose them to SDB.

Beyond clinical evaluation, questions such as: “Does your child grind his/her teeth at night?” “Is your child snoring during sleep?” “Does your child occasionally wet the bed?” Help highlight potential risk factors for SDB and should be included during review of the dental/medical health history. Adjunctive screening tools such as BEARS (B=Bedtime Issues, E=Excessive Daytime Sleepiness, A=Awakenings During the Night, R=Regularity and Duration of Sleep, S=Snoring) are also helpful for practitioners and parents to identify children with sleep problems.

As dentists, we are not in a position to diagnose sleep disorders. Instead, we play an important role in recognizing high-risk patients and referring them for proper evaluation. Step one is to refer patients to a sleep specialist to have a sleep study. The study will include a polysomnogram, which measures apneas or hypopneas to determine the apnea-hypopnea index (AHI). An AHI between 1 and 5 per hour is generally considered mild OSA, whereas an AHI ≥ 5 per hour is considered to be in the moderate-to-severe range. Adenotonsillectomy (AT) is considered the treatment of choice in children once moderate-to-severe AHI is documented on initial polysomnography. According to a meta-analysis by Brietzke et al, ‘uncomplicated’ pediatric patients with OSA who underwent AT experienced a success rate of 83 percent (P < 0.001) measured by normalization in their polysomnogram and symptom alleviation. Patients who were obese or had craniofacial abnormalities, however, experienced persistence of symptoms.

Other treatment options besides AT include continuous positive airway pressure (CPAP), nasal steroids, rapid palatal expansion (RPE) and myofunctional therapy (MT). In the realm of dentistry, RPE and MT are options we can offer to our patients, so I’ll highlight those briefly. RPE devices can be used in children to help with maxillary transverse deficiency, making it possible to broaden the maxillary arch and widen the nasal vault. According to a meta-analysis by Vale et al., RPE had a significant effect on normalizing AHI in children and adolescents under 18 years with OSA. Myofunctional therapy involves isotonic and isometric exercises that target the lip, tongue, and oropharyngeal structures. According to a systematic review by Camacho et al, MT provides a reduction in AHI of approximately 62 percent in children and improves subjective sleepiness as demonstrated by a reduction in Epworth Sleepiness Scale (ESS) score.

Overall, sleep disturbances in children are common and can be managed early on through proper identification and referral to sleep specialists, surgical interventions, and non-surgical treatments including oral appliances and MT. The small steps we take to identify children with SDB may help save lives and improve the quality of sleep for our patients.

ABOUT THE AUTHOR

Dr. Neema Dad is a second year pediatric dental resident at the Yale School of Medicine and Yale New Haven Children’s Hospital. He was born and raised in Plano, Texas. He completed his undergraduate education at Austin College in Sherman, Texas, majoring in Biology and Business Administration. He graduated from Texas A&M Baylor College of Dentistry in Dallas, Texas, in 2016. Outside of dentistry, Dad enjoys graphic designing, hiking, and photography.
Oral Exam Review

SEPTEMBER 6, 2018

Grand Hyatt Denver, Colorado

Preparing for the Oral Board Exam? Do you want to brush up on your oral test-taking skills? This course will provide you with the opportunity to participate in numerous mock examinations. Drs. Fields and Wright will focus on the area of the examination process as well as topical areas of the exam. Not only will they discuss how cases are designed and created, but also provide suggested readings to help you study.

Speakers
Henry Fields, D.D.S., M.S., M.S.D.
Timothy Wright, D.D.S., M.S.

Who Should Attend
Members preparing to take the ABPD’s Oral Clinical Examination.

SEPTEMBER 7 – 9, 2018

Comprehensive Review of Pediatric Dentistry

Grand Hyatt Denver, Colorado

Taught by expert clinicians, the Comprehensive Review Course will provide attendees an extensive review of pediatric dentistry. The topics discussed in this course include growth and development, assessment and prevention, oral pathology, care for special needs patients, restorative dentistry and materials, trauma, behavior management and pulpit therapy. Whether you’re preparing for the ABPD examination or just need a refresher, this course is an in-depth summary for all pediatric dentists.

Course Chair and Speaker
Amr Moursi, D.D.S., Ph.D.

Speakers
Catherine Flaitz, D.D.S., M.S.
Christina Carter, D.D.S., D.M.D.
Timothy Wright, D.D.S., M.S.

Who Should Attend
Any dentist treating children; whether you are preparing for the ABPD examination or just need a refresher.

Dental Assistant Sedation Course

OCTOBER 26 – 27, 2018

Hilton Austin Austin, Texas

Your Role in the Safe Sedation of Children

This one-and-a-half-day course is specially designed for the pediatric dental assistant to enhance their knowledge and understanding of sedation emergencies and other emergent medical conditions in the office. An introduction to oral sedatives and using nitrous oxide/oxygen sedation will be included. Participants will learn how to organize and prepare the office for an organized response to a medical emergency and how to assist in the management of medical and sedation emergencies.

Recently added is a four hour workshop on Saturday morning that allows hands-on training for the dental assistant. Participants will rotate through multiple stations to include airway management, airway equipment, papoose board and monitor placement.

Course Chair and Speaker
Bobby Thikkurissy, D.D.S., M.S.

Speakers
Stephen Wilson, D.M.D., M.A., Ph.D.

Who Should Attend
Those on the dental team involved with the sedation of children in their office.

Safe and Effective Sedation for the Pediatric Dental Patient

OCTOBER 26 – 28, 2018

Hilton Austin Austin, Texas

This course features the recognized leaders in the field, both in dental anesthesia as well as pediatric dentistry. You’ll find didactic lectures, case studies, film clip sessions, panel discussions and hands-on breakouts with personalized attention. This course will offer opportunities to gain hands-on experience while learning airway techniques to rescue patients and will include breakout sessions with manikin practice with face masks, ambu bags and the insertion of nasal and oral airways; all in a personalized setting with real equipment and monitors.

Course Chair and Speaker
Stephen Wilson, D.M.D., M.A., Ph.D.

Course Vice-Chair and Speaker
Bobby Thikkurissy, D.D.S., M.S.

Who Should Attend
Any dentist who sedates children in their office and wants to be taught by the leaders in the field who wrote the current AAPD-AAP Guidelines.

HRSA Dental Faculty Loan Repayment

Meet the Recipients

Dr. Samah Omar, Loma Linda University

Through the HRSA Dental Faculty Loan Repayment program, Loma Linda University has been able to retain Dr. Samah Omar as an associate professor and full-time faculty member within the Department of Pediatric Dentistry. Omar earned her dental degree in 1999 from the Jordan University of Science and Technology and worked in private practice and community hospital prior to moving to the U.S. and completing the International Dentist Program. Omar received her certificate in pediatric dentistry in 2010 and Master of Science in Dentistry degree in 2011 from Loma Linda. She is certified and a diplomate of the American Board of Pediatric Dentistry.

Loma Linda University’s School of Dentistry has had its pediatric dentistry residency program for more than two decades. The City of San Bernardino and its surroundings has a high rate of poverty with more than 50 percent of the child population either uninsured or using DentiCal. Many of the private pediatric dentistry offices do not accept DentiCal, making the Loma Linda Pediatric Dentistry Clinic one of the largest clinics that accepts DentiCal in The Inland Empire.

Since its inception, the class size has expanded from two to four residents. Recent graduates who are candidates for becoming faculty often have a difficult time deciding between entering private practice and academics due to their outstanding educational loans.

Dr. Jennifer Fernandez, University of Tennessee

The University of Tennessee College of Dentistry has a rich heritage of alumni who became leaders in Pediatric Dentistry as well as organized dentistry. This traces back to faculty who were role models of service, commitment to the patient first and clinical excellence. The challenge going forward is replacing those icons. In 2016, the average age of the faculty in the Department of Pediatric Dentistry was 64 years. This is not unique to the University of Tennessee. Over time residents have been identified with teaching gifts and leadership skill; who would be interested in dental education if it were not for the mountain of student debt. The HRSA Dental Faculty Loan Repayment program has enabled the identification and recruitment of such a person in Dr. Jennifer Fernandez, who tells the following story:

“I graduated from the University of Tennessee’s pediatric dental residency in 2016. While under the mentorship of Martha Wells and Larry Dormois I discovered an affinity for teaching, but due to the heavy burden of student debt I was forced into private practice. I moved away after graduation to work and due to life circumstances, found myself back in Memphis. The Dental Faculty Loan Repayment Program allowed me to both enjoy a life of teaching and comfortably repay my student loans. Were it not for the faculty loan repayment half of my take home pay would go toward debt repayment, which would preclude the faculty position. The freedom it has given me to pursue this field of work is without measure, and for that I am truly grateful.”

Look for profiles of additional recipients in future issues of PDT.

2018 Joint Academic Day

Plan on meeting your colleagues for the 2018 Joint Academic Day being held at the Hilton Hawaiian Village Honolulu, Hawaii, on Thursday, May 24, 2018. The combined morning session for pre- and post-doctoral program directors will feature successes of various pediatric dentistry programs that are recent recipients of HRSA grants and a discussion of techniques for teaching silver diamine fluoride.

Following lunch, the Society of Predoctoral Program Directors and the Society of Postdoctoral Program Directors will hold discussions on issues relevant to predoctoral and postdoctoral topics of interest.
Are You Adapting to the Changing Marketplace?

In the last 10 years the dental marketplace has changed dramatically; insurance reimbursement has decreased, competition has increased and a higher daily volume of production is needed to produce enough profits to meet expenses.

Managing the practice and employees in this atmosphere can be overwhelming and doctors find it challenging to have a work/life balance. To adapt to this changing marketplace, doctors must have excellent leadership skills. Without these skills, profits and team morale will lack due to poor business planning, inefficient systems and lack of employee accountability. This will ultimately lead to doctor frustration and exhaustion.

Below are the top challenges that doctors are currently facing and the leadership actions they can take to help meet these challenges successfully.

MARKETPLACE CHALLENGES

- Expansion of reduced insurance reimbursement plans and decreased Medicaid reimbursement
- Increased complexity of the insurance market and reimbursement
- Increased competition for new patients from corporate dentistry, general dentists and increased number of pediatric dental graduates
- Shrinking profit margins
- Doctors lack of fiscal management and business planning
- Doctors lack of knowledge on front desk systems and if front desk employees are properly trained
- Doctors unsure of what is happening at the front desk; poor verbal skills, lack of professionalism, financial arrangements not properly presented and followed through
- Smaller pool of qualified employees
- Employees not committed to their job; absence of personal accountability, showing up on time, caring about doing a good job
- Scheduling the increased volume of production needed and not have the schedule run behind
- Parents not wanting to take their children out of school for appointments

LEADERSHIP SKILLS NEEDED

Business Planning: If you fail to plan, you plan to fail. Set goals and monitor them regularly so the doctor knows if the practice business plan is being met, if not, then timely adjustments can be made in production, collections and expenses.

- Create a practice business plan that defines:
  - Break-even point to identify the collection goal required to support overhead expenses, debt service, doctor income and retirement savings
  - Practice goals to support the break-even collection goal:
    › Average number of doctor, recare, hospital and sedation work days/month
    › Average daily production for doctor, recare, hospital and sedation
    › Collection ratio
    › Average number of new patients/month
  - Overhead expense budget
- Control lifestyle costs and reduce debt to be better able to adapt to economic downturns and reduced insurance reimbursement if and when they occur
- Monitor goals:
  - Monitor daily
    › Production for each producer/provider
    › Month to date production vs goal for each producer & the total practice
    › Show rate of patients: number of patients that showed up for their appointment/number of patients scheduled
    › Treatment acceptance ratio: case acceptance/case presentations = 80 percent to 90 percent
  - Monitor monthly
    › Total practice production
    › Total producer production (doctor, recare, hospital, ortho, IV sedation)
Employee Management:
The doctor must help lead and motivate employees to their personal goals and the practice goals. Every person wants to feel a sense of belonging and recognized for making a positive difference. Happy employees are productive employees who stay long term.

- Doctor shares practice vision and goals with team members
- Create patient and team mission statements that put the doctor’s vision into words and create a clear sense of purpose and accountability. When all team members are working toward a common goal, it greatly increases the probability of success
- Create a business culture of mutual respect and trust
- Properly train employees
- Hold team members accountable for their job performance
- Regularly recognize employees who go above and beyond in their performance
- Identify and develop team members with leadership potential to become the office manager, front office coordinator and clinical coordinator to help hold employees accountable for proper job performance and maintain efficient systems
- Hold regular team meetings

Holding Effective Team Meetings:
Hold productive morning meetings, monthly team and quarterly department (clinical, front office, leaders and marketing) using an action plan form so follow-up on the changes discussed can be tracked and implemented.

- Utilize meeting agendas to stay on track
- One team member should run the meeting while another takes notes. Meeting minutes and the Action Plan items are typed, printed and given to each team member after the meeting. This will help create accountability
- Place all meetings for the year into the schedule to maintain consistency

Efficient Scheduling:
Proper scheduling controls the pace and productivity of the day versus a day of stress and chaos. Use a proactive approach by using block scheduling to schedule an “ideal day” that will produce the daily restorative and recare producer goals.

- Not all procedures should be scheduled for the same amount of time. Consider qualifying each treatment appointment as either a simple or complex appointment giving each one a specific amount of time for their respected category and alternating them in the schedule to avoid complex appointments being booked back to back
- Schedule appointments for patients with greater behavior management needs and/or more procedures in the morning
- Allow for uninterrupted time with the doctor for sedations; i.e. no recare exams
- Block enough new patient appointments each month in your schedule
- Leave slots available for urgent procedures once your appointment schedule is at capacity
- Work the recare and unscheduled treatment plan reports consistently
- Coach team members on proper verbal skills to minimize no-show or short notice cancellations
- If a patient fails to keep an appointment, a team member should telephone the parents within 10 minutes. If unsuccessful, call again within 24 hours. If the appointment cannot be rescheduled, the patient must be flagged in the computer. At the end of each month, a broken appointment report can be run so that patients with failed appointments can be re-contacted
- Efficiency must be maximized when scheduling patients with very low reimbursement plans or providing care to these patients may become cost prohibitive. Consider the following:
  - Schedule these appointments during the hardest times of the day to fill (if the plan allows the doctor to dictate appointment time). Normally this is between 10:00-2:00
  - Understand the volume required. Typically a procedure that is minimally reimbursed must be performed three to five times to get the same dollar of profit as when it is reimbursed at full fee. That is why efficiency and high utilization of expanded function team members, if your state allows, is important
  - Delegate as much as possible that is within the state law to dental team members
  - Track new patients in lower fee plans separately from private pay. Limit patients by age or number of patients/month on lower fee plan patients if necessary to maintain adequate collections
  - Have a strict no-show, short cancel policy. Dismiss at first or second no-show. Have parents sign an appointment agreement form. These can be different from private pay patients
  - Designate a flow coordinator to help the team manage the flow of patients to the back and direct the doctor where to go next so the doctor’s time is efficiently used
Accounts Receivable Management: Insurance management has become more complex and requires more time than ever before. Statistics now show that an additional full-time front office team member is needed to manage the collections from insurance companies than what was necessary five to 10 years ago.

- Three important tasks the front office team should be performing to ensure the best collections for the practice are:
  - Verifying patient’s insurance eligibility and benefits
  - Utilize a coverage table for the insurance plan in the practice management software
  - Utilize a payment table for the insurance plan in the practice management software
- Collect all patient payments, deductibles and estimated portions at the time of service
- Monitor outstanding insurance claims
  - Submit all claims daily at the end of each day
  - Follow up with the insurance company if the claim is unpaid after 14 days
  - At 60 days with no insurance payment, close the claim and send the parent a statement for the entire balance
- Accounts receivable report: take appropriate actions to collect all balances
  - Print weekly and review all accounts with balances past 14 days
  - Utilize electronic communication to send statements and email parents regarding balances after 21 days (following HIPAA guidelines)
  - After 45 days past due, call parent and remind that balance is due
  - If not paid after 90 days, send account to collections

Create a Marketing Team: Have one person from each department on the team to create and carry out the marketing actions.

- Consistently track referrals and new patients using practice management software
- Hold a monthly marketing meeting to review the new patient referral report, discuss what marketing actions have been successful and what new marketing actions will take place in the next quarter
  - Internal marketing; monthly contest giveaways, cavity-free club giveaways, frequent team theme days, celebrating team member birthdays/anniversaries, new patient t-shirt giveaways
  - External marketing ideas; quarterly deliveries to referring offices, posting on social media and supporting community groups and events
  - Consider hosting an annual patient appreciation event with an ice cream truck at the office or at a local frozen yogurt shop
  - Consider hosting an annual referring office appreciation event at a local event room or restaurant
- Review website to check for anything that may need updating including doctor and team photos, advances in technology to advertise and ability for easy viewing on any mobile device
- Focus on creating a bigger presence on social media. Create an Instagram account and set up to sync to Facebook account to post simultaneously. Set a goal to post a minimum of 1-3 times per week
- Coach team on verbal skills to let parents know the practice is always accepting new patients

There is a high financial and emotional cost to being unprepared to market changes. By implementing the recommended leadership skills, doctors will be able to reduce their stress and find more enjoyment in their work.

Published four times a year, Practice Management and Marketing News is a featured column in Pediatric Dentistry Today.

One simple observation can make a big difference.

Your pediatric patients who have enamel hypoplasia together with oral thrush or hypoparathyroidism may be exhibiting a critical, common early manifestation of autoimmune polyendocrinopathy-candidiasis-ectodermal dystrophy (APECED) or autoimmune polyglandular syndrome type-1 (APS-1), a rare primary immunodeficiency disorder. Because APECED/APS-1 typically goes unrecognized until later in life, patients can go on to develop a variety of disease manifestations that cause end-organ damage and significant morbidity and mortality.

Here at NIH, our APECED/APS-1 research aims to intervene early with immunomodulatory therapy in hopes of preventing the development of autoimmune manifestations, thus changing the natural history of the disease and improving prognosis and quality of life.

We are counting on pediatric dentists like you to help identify and refer these at-risk children, specifically those who:

- Are of very young age
- Have enamel hypoplasia together with either oral thrush (current or previous history) or hypoparathyroidism

For more information or to refer a patient, please contact our study coordinators:

Monica Schmitt, CRNP and Elise Ferré, PA-C
Phone: 301-496-8985 Email: APECED@niaid.nih.gov

New Practice Facts: 2017 Survey of Pediatric Dental Practice Now Online

The AAPD Survey of Dental Practice, last published in 2011, supplies up-to-date information on critical functions of pediatric dental practices, as well as offers an inside look at such topics as changing demographics of the profession, perceptions of busyness, geographic variations in the pediatric dental workforce, Medicaid participation, and charitable care. The survey was distributed to 6,505 selected AAPD members last summer, garnering a response rate of 39 percent (2,549 responses out of 6,505).

Here are some intriguing facts from the survey:

• Seventy percent of pediatric dentists accept Medicaid patients. Publically insured patients represent a higher percentage of their practices in 2016 (34 percent) than in 2011 (26 percent).

• The majority of pediatric dentists in 2016 were women (52 percent) compared with 14 percent in 1998.

• Data suggest a move away from solo to group practice. In 2016, 45 percent of pediatric dentists reported three or more dentists in their primary work setting compared to 11 percent in 2011.

• The percentage of pediatric dentists providing charitable care increased from 74 percent in 2011 to 78 percent in 2016. The estimated dollar value of care provided free on an annual basis increased from $15,700 in 2011 to $18,300 in 2016.

• Patients’ wait times to see the dentist upon arrival to the office remain at the national average of eight minutes.

• Pediatric dentists who reported being “not busy enough” in their practices were more likely to be located in urban counties with populations greater than 1.5 million people (25 percent). Those practicing in counties with under 275,000 population were the least likely to report not being busy enough (11 percent).

• Perceptions of busyness also varied by regions of the country, as shown by the following chart.

You will find more facts of interest by viewing the full survey at [http://www.aapd.org/assets/1/7/AAPD_CHWS_survey_Pediatric_Dentistry_final.pdf](http://www.aapd.org/assets/1/7/AAPD_CHWS_survey_Pediatric_Dentistry_final.pdf).

Results from the comprehensive pediatric dentist workforce study conducted in conjunction with the Survey of Dental Practice will be published this fall. Commissioned by the AAPD and produced by the Center for Health Workforce Studies, Albany, N.Y., the workforce study has gathered and analyzed credible evidence to provide solid projections of future supply and demand for pediatric dentists in the U.S.
Final Report Now Available: Predictive Model for Caries Risk Based on Determinants of Health Available to Primary Care Providers

A full report of the third year of research exploring oral health promotion in primary care is now available on the AAPD Policy Center website at http://www.aapd.org/policy_center/.

With an aim of creating a history-based, caries-risk screening tool that more easily assimilates into the work flow of a well-child visit, a predictive model was developed at Nationwide Children’s Hospital (NCH). The model characterizes the likelihood a child would have oral disease or risks of future disease at the time of their first dental visit and is based upon information noted in the early well-child visits.

The study, with over 2,000 infants, produced a predictive model that suggests the odds of a child having tooth decay at the first dental visit more than doubles for every year of increased age.

Additionally, it offers clues to assist health care professionals identify tooth decay risk in young children before even looking in their mouths. Starting at the 18-month well-child visit, health care providers can use five variables to assess the odds of future or present tooth decay risk. The five variables are:

- Age of the child
- History of a preventive dental health visit
- Duration of breastfeeding (past age 1)
- No-show rate (such as broken appointments, etc.)
- Preferred spoken language

With such a predictive tool, health care providers could easily administer caries-risk assessment as a part of the well-child visit without taking time from other equally important health concerns.

New Committee on Safety Update

The AAPD Committee on Safety was created to:

- Examine the processes and culture of patient safety as they pertain to the practice of pediatric dentistry.
- Make recommendations to the AAPD as to possible initiatives the organization could implement to enhance the safety of children in a pediatric dental office.

Its vision is the safest possible oral health care delivery system, protecting the health and well-being of patients and their providers. Its mission is to apply the diverse resources of the American Academy of Pediatric Dentistry in aiding dentists to create a culture of safety for both patients and providers in the dental setting. This is done by building and incorporating systems of safety into all aspects of the delivery of oral health care.

The committee has had multiple conference calls and met in Chicago in December 2017 and April 2018. They have completed a Delphi exercise in which various topics related to safety were reviewed and discussed (Sedation, Office Policies and Procedures, Physical Safety Patients, Physical Safety Staff, Infection Control, and Therapeutics). They also assisted in updating the joint AAP/AAPD sedation guideline.

Some of the potential deliverables the committee would produce are:

- “Safety Corner” in each issue of Pediatric Dentistry Today (PDT).
- “Office Safety Elements” manual/toolkit.
- Review and update existing AAPD sedation policies and recommendations to match joint AAP/AAPD sedation guideline and addendum.
- Engage OSAP (The Organization for Safety, Asepsis and Prevention) about hosting another webinar (e.g., infection control).

Evidence-based Dentistry Committee Update

Two new EBD guidelines were accepted by the National Guideline Clearinghouse:

- Clinical Practice Guidelines for use of Vital Pulp Therapies in Primary Teeth with Deep Caries, and
- Clinical Practice Guideline on the Use of Silver Diamine Fluoride for Dental Caries Management in Children, Adolescents and Individuals with Special Healthcare Needs.

Patient education materials based on the new guidelines have been developed for silver diamine fluoride, pulpotomy and indirect pulp therapy. They are available through the AAPD’s online store.

The non-vital pulp systematic review workgroup, comprised of Drs. Shahad Al Shamali, Chia-Yu Chen, James Coll, Abdullah Marghalani, N. Sue Seale, and Kaaren Vargas, met in December to begin work and the workgroup will meet again for a full-day work session at the 2018 Annual Session. In vivo and in vitro protocols will be registered within the year.

The EBD Committee is forming a new workgroup on behavior guidance for the pediatric dental patient. The new behavior guideline, based on an existing systematic review, will be published in early 2019.

For more information, please contact Director, Research and Policy Center Robin Wright at rwright@aapd.org.
The ADA Council on Dental Benefit Programs, with support from knowledge experts in the dental community and Practice Institute staff, published three new 2017/2018 CDT code guides that cover teledentistry (D9995-D9996), the application of a caries-arresting medicament (e.g., silver diamine fluoride) (D1354), and finger-prick in-office diabetes testing (D0411). Each guide will help dentists understand the procedures underlying these CDT 2017/18 codes and how they should be reported.

These guides are available on the ADA’s Coding Education page at http://www.ada.org/en/publications/cdt/coding-education.

D9995 and D9996 – Guide to Understanding and Documenting Teledentistry Events

CDT 2018 marks the addition of codes for documenting and reporting the two types of teledentistry scenarios a dentist can play a part in – one where data is collected and addressed in real-time, and the other where data is collected, stored and forwarded to be addressed at another time and location.

Teledentistry provides the means for a patient in one physical location to receive services, and the dentist or other oral health or general health care practitioner overseeing the delivery of those services is in another location. This mode of patient care makes use of telecommunication technologies to convey health information and facilitate the delivery of dental services without the physical constraints of a brick and mortar dental office.

ADA Guide to Understanding and Documenting Teledentistry Events is available at no cost for you to view or download at https://www.ada.org/~/media/ADA/Publications/Files/D9995andD9996_ADAGuidetoUnderstandingandDocumentingTeledentistryEvents_v1_2017Jul17.pdf?la=en.

D1354 – Guide to Interim Caries Arresting Medicament Application (aka Silver Diamine Fluoride)

CDT code D1354 has been in effect since Jan. 1, 2016. This guide addresses two notable aspects of the procedure and its code – first that the procedure is not limited to the application of Silver Diamine Fluoride (SDF) as the medicament; and second the clarifying revision that this procedure is to be reported by tooth treated, not by number of lesions.

In some parts of the dental community D1354 has been referred to as the SDF code, which is an understandable misperception as this medicament is widely used for the procedure. The code’s nomenclature and descriptor are intentionally more broadly worded and inclusive. Find out why in the guide. Inside you will also find out about this code’s CDT 2018 revision, adding “…per tooth” to its nomenclature so that the procedure is reported consistently.

D0411 – Guide to Point of Care Diabetes Testing (“finger-prick”) Procedure and Reporting

CDT 2018 marked the addition of “D0411 HbA1c in-office point of service testing” – a chair-side screening procedure that, along with appropriate referral, aids in the diagnosis of pre-diabetes and diabetes. This procedure, also known as finger-stick random capillary HbA1c glucose testing, is relevant to dentists as diabetes is a risk factor related to periodontal disease.

HbA1c testing enables a dentist to amend the patient’s treatment planning depending on whether the results are the first indicator of a new diabetic condition, or if the results indicate a change in the existing diabetic condition.

ADA Guide to Point of Care Diabetes Testing and Reporting is available at no cost for you to view or download at https://www.ada.org/~/media/ADA/Publications/Files/D0411_ADAGuidetoPointsOfCareDiabetesTestingandReporting_v1_2017Jul17.pdf?la=en.

Questions about these guides, other coding education material, or the CDT Code itself should be directed to Director of Dental Benefit Programs Mary Essling, at messling@aapd.org or (312) 337-2169.

You can view a complete archive of Behind the Code articles dating back to 2008 on the AAPD website at http://www.aapd.org/resources/code_archive/.
Another Win for Member Dentists

The Texas Dental Association and the Texas Academy of Pediatric Dentistry contacted AAPD in early 2018 regarding complaints about DentaQuest’s new restrictive policy that requires preauthorization for the use of D9248 non-intravenous conscious sedation. DentaQuest is the Texas State Medicaid Dental Program.

The explanation of benefits (EOB) language was confusing as it gave the impression that a dentist needed to document failure of nitrous before D9248 would be approved. In actuality, DentaQuest was looking for documentation on why oral conscious sedation was used versus nitrous.

AAPD staff reached out to the National Dental Director for DentaQuest.

After a couple of conversations with the Dental Director, AAPD, TDA and TAPD staff and the AAPD Public Policy Advocate, the confusion was resolved. DentaQuest was in the process of revising the EOB language to clarify that nitrous is one of several criteria and not a requirement.

DentaQuest provided the following remarks:

DentaQuest is in the process of reviewing and revising its EOB denial language.

DQ’s internal criteria has not changed. The denial language includes the qualifiers which are also in the Office Reference Manual. The only change was requiring prior authorization with appropriate documentation. Clinical denials since the change are low. However administrative denials are occurring as the doctor’s documentation, which was spelled out for them, has been incomplete or missing. We would suggest continuing to monitor the effects of the change.

AAPD believes that providing documentation of medical necessity is a legitimate function of a Medicaid dental program fiscal intermediary. The indications for all provided services should already be part of the patient record and so long as DentaQuest is not requiring anything more, the requirement is not unreasonable. We are told that if the narrative notes an appropriate reason/contraindication(s), per the AAPD Guideline which DentaQuest currently adheres to, DentaQuest will pay the claim.

AAPD will continue to monitor this matter.

Dr. Bill Steinhauer, AAPD Texas Public Policy Advocate said, “The Texas Dental Association and the Texas Academy of Pediatric Dentistry had both found DentaQuest in Texas to be unsympathetic to their concerns about inappropriate denials of conscious sedation prior authorization requests. Once AAPD contacted Dr. Thommes there was an immediate turnaround within DentaQuest. Now the requests are being handled both expeditiously and appropriately.”

Please feel free to contact Director of Dental Benefit Programs Mary Essling at messling@aapd.org or (312) 337-2169.

How Would You Like To Have The Best, The Happiest, And The Most Competent Pediatric Dental Assistants Who Actually Make You Money?

The Pediatric Dental Assistants Association is proud to accept memberships from qualifying pediatric dental offices. Take a look at everything that is included in your exclusive membership:

- The Annual PDAA Conference* - an excellent place to keep your PDAs connected and excited to be part of bigger community of high-performing PDAs.
- Pediatric dental assistant video training modules in key practice areas with optional Q&A assessments.
- Email support from Dr. Haugseth personally.
- 24/7 access to videos and training modules to allow learning during downtime at the office, at the house, or even from a tablet.
- Opportunity to request new training modules to be developed.
- A bi-monthly newsletter filled with fun, helpful news and information.
- ...and so much more!

As a PDAA member, your practice receives terrific benefits. Your dental assistants gain valuable knowledge and training. Their increased abilities help grow and develop your practice. And overall communication and patient care are greatly improved. Learning new skills and sharpening the skills of your existing assistants is the key to keeping your practice happy, productive, and profitable.

Maximize your PDA’s value to your practice!
Call (770) 823-3534 or visit www.thePDAA.org to join today!

AAPD President Participates in National Children’s Dental Health Month Satellite Media Tour

On Jan. 31, 2018, AAPD President Dr. James Nickman completed 28 broadcast media interviews with TV and radio stations coast to coast. He addressed why little teeth are such a big deal and shared simple tips and tricks for keeping children’s teeth healthy, including the importance of an Age One dental visit, what to do when a baby tooth gets knocked out, as well as helpful tips on teething. Dr. Nickman also debunked some widespread misconceptions on oral health such as if tooth decay is genetic, the importance of brushing your tongue and timing on the cessation of thumb sucking and pacifier use. In addition, he discussed new treatment options for cavities such as silver diamine fluoride. From Portland’s KOIN-CBS TV’s KOIN News, This Morning to Chicago and WSRB-FM Radio Real Talk, over to Rhode Island’s WTKR-CBS TV Coast Live and down to West Palm Beach’s WPBF-ABC TV WPBF 9 AM News, broadcast and radio outlets were eager to hear his expert advice to help set their viewers (and kids) up with a lifetime of healthy oral habits!

NCDHM Media Coverage

As part of National Children’s Dental Health Month, AAPD was tapped to participate in many editorial opportunities. AAPD President Dr. James Nickman contributed articles to several publications on silver diamine fluoride, including Dental Economics, Dimensions of Dental Hygiene, as well as Decisions in Dentistry, all for their respective February issues.

In Chicago, AAPD spokesperson Dr. Mira Albert fielded a four and a half minute segment on Feb. 14, for Chicago’s The Jam/WCIU focusing on topics such as fluoride, Age One dental visit, flossing, sugary snacks/beverages and the importance of keeping little teeth healthy.

AAPD Chief Policy Officer Contributes to Dentistry Today

For the second year in a row, AAPD was invited to share commentary with Dentistry Today on our policy and research initiatives as part of NCDHM and their February issue. Dr. Paul Casamassimo referenced how the AAPD is a strong supporter of NCDHM for the care it delivers, but also because it contributes important metrics indicative of oral health, fosters access to care in novel ways, and engages communities outside of dentistry to create awareness and facilitate care.

Mouth Monsters is a consumer-focused media campaign initiated by the AAPD in 2014 via partnership with the leading public relations firm Weber Shandwick. The campaign goal is to distinguish the AAPD and pediatric dentists as the go-to experts on children’s oral health and get more children to see a pediatric dentist by age 1. AAPD has invested over $1 million in this campaign since its inception. Visit the Mouth Monster Hub at http://mouthmonsters.mychildrensteeth.org/.

Did You Know
Whole Life Insurance as a Retirement Planning Tool?

Whole life insurance need not just benefit your survivors. Leverage this multi-faceted tool as part of your retirement planning strategy.

Contributed by Treloar & Heisel, Inc.
Last segment in a three-part series of articles about whole life insurance.

Over the course of this article series, we have discussed several advantages of whole life insurance in terms of its capacity to provide you with *unlimited time* to achieve your life goals, and *guarantees* that stretch its utility beyond simply providing a death benefit. Properly implemented by a skilled and knowledgeable professional, whole life insurance can be an important complement to your existing retirement planning strategy.

**LIFE INSURANCE WITH BENEFITS FOR THE LIVING**

Indeed, the most important use of life insurance is to protect widows, widowers and orphans from financial destitution. While term insurance can be used for that purpose, it does require that you die during the term of the contract (5-year, 10-year, or however long) in order for your beneficiaries to collect the benefit. The beauty of whole life insurance is that there is no expiration date to the contract. Hopefully you will live a very long time, and if you don’t put it to use to protect your spouse and young children, you can very effectively use it post retirement – *while you are still alive*. A quick refresher before we begin: remember, provided you pay the premiums, whole life insurance builds up cash value over time. You get to choose how you use those cash values.

**CONSIDER ADDING A NON-CORRELATED ASSET CLASS TO YOUR RETIREMENT PORTFOLIO**

Many people have a retirement plan, such as a 401(k) or 403(b) plan, the assets within which are primarily made up of mutual funds. Mutual funds are subject to the whims of the market. Whole life insurance is not. It is what we call a *non-correlated asset* to the investment marketplace. Non-correlated asset classes are beneficial for people in retirement because historical financial market data tells us that on average, for every ten years worth of time, the market is negative in its yield for three years. In those negative years, you may want to use the cash value of your whole life insurance policy to bolster your retirement plan and give your portfolio time to recover.

**ACHIEVING THE RIGHT MIX**

If you speak with an investment professional, chances are they will tout the benefits of keeping your savings entirely in the financial markets. An insurance professional, on the other hand, may heavily promote insurance products. The right answer is achieving the correct mix of tools to support your retirement strategy. Just as there is a healthy composition of equities to fixed income in an investment portfolio (a concept known as the ‘efficient frontier’), so is there a healthy composition of whole life insurance death benefit to market-correlated retirement assets. This is all to say that there are many benefits to continuing to save in your 401(k) or other retirement plans. Just don’t put all your eggs into one basket. Adding a non-correlated asset such as whole life insurance not only diversifies your portfolio, but it also adds a new retirement income source.

**LAST BUT NOT LEAST, CONSIDER WHOLE LIFE INSURANCE AS PART OF YOUR LONG TERM CARE PLAN**

As life expectancies increase so does the likelihood of needing long term care. The US government estimates that almost 70% of people turning age 65 will need long-term care at some point in their lives [Source: http://longtermcare.gov](http://longtermcare.gov). However, many people are hesitant about purchasing long term care insurance because they think they may not need it. You can use the built up cash value within your whole life insurance policy to help pay for long term care services. You can also combine life insurance and long term care products, and enhance your plan through additional features such as accelerated death benefits.

**WORK WITH AN EXPERIENCED PROFESSIONAL**

Though we have made this point before, we cannot stress it enough. It is critical that you work with an experienced and knowledgeable financial services professional who understands the complexities of insurance and retirement planning, and knows the particular challenges and needs of working with professionals in the dental field.

**ABOUT TRELOAR & HEISEL**

Treloar & Heisel is the premier financial services provider to dental and medical professionals across the country. We assist thousands of clients from residency to practice and through retirement with a comprehensive suite of financial services, custom-tailored advice, and a strong national network focused on delivering the highest level of service. For more information, contact us at (800) 345-6040, info@th-online.net, or visit us at http://www.treloaronline.com.

---

1. Access to cash values through borrowing or partial surrenders will reduce the policy’s cash value and death benefit, increase the chance the policy will lapse, and may result in a tax liability if the policy terminates before the death of the insured.

2. Accessing cash values, through loans and partial surrenders or by accelerating benefits for long term care benefit payments, will reduce the death benefit payable, the cash surrender value and the long term care coverage available.
The American Board of Pediatric Dentistry significantly simplified our specialty board certification by introducing the Oral Clinical Examination in 2005, changing the voluntary certification process from a four-part to a user-friendly two-part examination. In 2012, ABPD launched the Renewal of Certification Process (ROC-P). By most measures, our certification and recertification processes have been successful and well received. The psychometric data collected since 2005 has convincingly demonstrated that the Qualifying Examination and the Oral Clinical Examination are reliable in validating the minimal competence required of a board certified pediatric dentist.

Self-regulation is crucial to modern-day professionalism, and indeed essential to ABPD for it to remain relevant and thrive. To that end, a primary purpose of the ROC-P is to assure our stakeholders that as board certified pediatric dentists we continue to validate our clinical and didactic knowledge as well as our skills and techniques. ROC-P also involves licensure attestation, registration of CE credits, participation in the quality improvement modules, and every 10 years, an open book, multiple-choice examination. Initially, some diplomates expressed considerable angst about having to renew their board certification. Now, most diplomates seem to enjoy the quality improvement modules and derive valuable learning from the process. However, the questions remain if the ROC-P offers an improvement modules and derive valuable learning from the process. However, the questions remain if the ROC-P offers an adequate and appropriate mix of educational content; more fundamentally, how valid is this process for our certification renewal?

The Vision Initiative, instituted by the American Board of Medical Specialties (ABMS), which comprises of 24 medical specialty boards, is attempting to answer such questions. Last year ABMS appointed the Planning Committee to form the Commission whose charge is to make recommendations about the future of continuing board certification. The Commission was formed earlier this year with 27 selected board members representing stakeholders from within and outside of the medical profession: individual physicians, specialty boards, licensing organizations, credentialing authorities, state medical societies and the public at large.

The Vision Initiative consists of three phases. Phase I, the establishment of the Commission and the planning of its charge, is completed. Phase II, which is happening through 2018, includes gathering information from all stakeholders, examining physicians’ learning, considering how to incorporate new knowledge and clinical information in programs to help physicians stay up-to-date in their specialties, as well as assessing ways to support physicians’ autonomy and mastery. Lastly, in Phase III the Commission will publish a report with recommendations to the ABMS for their consideration regarding the principles, frameworks and program models for continuing board certification.

The ABPD believes the voluntary participation in continuous learning through board certification and recertification improves the quality of pediatric oral health care and patient outcomes. Our Board is constantly looking for ways to evaluate and strengthen the processes, to improve the lifelong learning experience for our diplomates, and to reassure the public that our self-regulation is appropriate and valid. We are, therefore, watching the work of the Commission and the progress of the Vision Initiative with great anticipation and interest that these efforts will help us hone the certification and recertification processes of ABPD.

You can find the details of the Vision Initiative by visiting their website at www.visioninitiative.org.

Whether you prefer the palette, or love the glove, Vella has you covered.

One great varnish. Now two great delivery systems!

Now you can apply clear formula Vella 5% sodium fluoride varnish with NuFluor from your favorite delivery system! Stick with the sturdy Vella stick, or switch to the popular back-of-the-glove technique with our new Vellamini. Either way, your patients enjoy improved esthetics, a smooth application and the protection they need. Vella looks better, feels better in the mouth and tastes great, improving patient compliance. Plus, Vella has great fluoride release and uptake at two hours.¹ And Vella provides relief from sensitivity. To order gluten-free Vella, call your favorite dental dealer, or test drive both by visiting preventech.com for FREE SAMPLES.

NOT ALL PATIENTS ARE PATIENT

LESS PREP, QUicker RESULTS

Time is of the essence with your littlest patients, who don’t always sit still in the chair. Work more efficiently with Hu-Friedy® Stainless Steel Crowns. These primary molar crowns feature natural contours and an ideal height, providing a comfortable fit for your patients while also saving you time chairside. Perfect for your patients. Easy for you.

WHY DENTISTS LOVE OUR STAINLESS STEEL PEDO CROWNS:

• Pre-trimmed, crimped and contoured surfaces
• Accurate occlusal anatomy that matches the natural tooth
• Ideal wall height that requires less prep
• More narrow width for quicker adjacent crown placement

Hu-Friedy will be at AAPD 2018. VISIT BOOTH 439

SEEKING PEDIATRIC DENTISTS

ALASKA—ANCHORAGE. A fantastic opportunity for a Full time Pediatric Dentist seeking a position in a private practice with buy-in potential. Our practice is growing with new patients and we need your help. The ideal candidate is highly skilled, enjoys collaboration, and open to mentoring & with unlimited growth potential. If you work independently and are dedicated to providing unmatched patient care, we are the practice for you. Alaska is perfect for building your career and raising a family. Requirements: Pediatric licensed dentist with Alaska license. For more information call 907-351-3459 or email your C.V. to Leannat@TRGcoaching.com.

ARIZONA—GOODYEAR. Exceptional pediatric dental practice has an amazing opportunity for a certified pediatric dentist! We have a well-established, state of the art, themed office in a rapidly growing area. Our office is looking for an enthusiastic pediatric dentist to join our team who will provide high quality care to our patients on either a full-time or part-time basis. Your office is doctor owned and has been a successful business for over 13 years. Associates earn a guaranteed daily base salary, monthly bonuses, paid vacation, and may participate in our retirement plan as well as group medical insurance. Requires certificate from accredited pediatric dental residency but current residents may apply. Please e-mail your C.V. to azkidsdentist@yahoo.com to learn more about this exciting opportunity!

ARIZONA—PEORIA. Pediatric Dentist Phoenix’s premier state-of-the-art multi-facility pediatric dental practice group located throughout the rapidly growing West Valley has an incredible opportunity for a FT/PT certified pediatric dentist. Offering a comprehensive compensation package, including malpractice, health, vacation, CE, retirement, and opportunity for partnership. Extremely competitive starting salary with incentives based on experience and ongoing production. Be part of our diverse team, providing all forms of sedation and hospital-based care for our community’s children. Three part-time and one full-time anesthesiologist on staff, to enhance our overall quality of care. Take a peek at our award winning website www.wvpdo.com and contact Terry Barnes at tbarnes@wvpdo.com for more information on this incredible opportunity.

CALIFORNIA—SAN DIEGO. Great opportunity for Pediatric Dentists in the San Diego County area. Join our team and be a part of something as extraordinary as the children you treat. With five locations, we are looking for someone compatible who is personable, enthusiastic, caring and someone who loves what he/she does. Currently, we are seeking both part-time and full-time positions. Requirements: pediatric dentist, CA license. For more information on our practice, please feel free to check out our website www.thestructedentists.com and send your resumes to nicki@thesuperdentists.com or call 619-548-8772 for more information on the opportunity.

CONNECTICUT—BRISTOL. State-of-the-art Pediatric Ortho modern practice in Bristol, CT is seeking a full-time or a part-time Pediatric Dentist for a fun and friendly work environment with focus on excellence in service. The practice: Quality-oriented while focusing on exceptional customer service. Patients' satisfaction is top priority. Central N2O, digital radiography, paperless charting (EagleSoft), and the latest in soft-tissue & hard-tissue laser technology (Fotona Lightwalker). We receive referrals from over 150 general dentists. We have a high volume of O.R/G.A cases. The ideal candidate: Quality-oriented, exceptional communication skills, interest in the latest technology, materials and techniques. Requirements: Graduate from a Pediatric Dentistry program. Must be a diplomate of the American Board of Pediatric Dentistry. Please e-mail resumes to nicki@thesuperdentists.com or call 619-548-8772 for more information on the opportunity.

We look forward to working with you!

MICHIGAN—PORTAGE. Southwest Michigan area of Portage, Michigan, just South of Kalamazoo. We moved into a brand new, custom built office October 2017 with purposeful room to add at least one more Pediatric Dentist. The mission of Portage Pediatric Dentistry is to be a positive part of the lives of our patients and of the community. I am a solo practitioner looking for an associate that would lead to partnership. I am looking for someone with a kind, compassionate, and warm personality. All levels of experience welcome. Our practice is one of three private pediatric dentistry offices in the area, with the next closest practices being over an hour away. Outside of a healthy pediatric patient base of routine care, we receive a large number of referrals from area general dentists. We currently have to limit the number of new patients and your addition would hopefully eliminate this. We are in network with Delta Dental Premier and Blue Cross Blue Shield and accept many other insurances as an out of network provider. We have a great working relationship with the local Bronson Hospital to do cases under general anesthesia. We are soon to be offering in office IV Sedation on a limited basis for the ideal candidate through the anesthesia group that provides all anesthesia for area hospitals. We also offer nitrous oxide, oral conscious sedation, Sprig Zirconia Crowns, and Silver Diamine Fluoride. Orthodontic treatment is referred out. The Portage/Kalamazoo area is located halfway between Chicago and Detroit, and one hour from Lake Michigan. Kalamazoo is home to Bell’s Brewery, Stryker, Pfizer, Western Michigan University, Kalamazoo College, and two large hospitals. Kalamazoo has offered the “Kalamazoo Promise” to state college applicants to students attending K-12, for the past 10 years (with partial tuition for students attending at least 4 years). Requirements: U.S. dental license, U.S. certificate in pediatric dentistry, Michigan State dental license, Michigan State specialty dental license to practice pediatric dentistry, Michigan State controlled substance license, U.S. DEA number, U.S. NPI number. Please send your CVs to jodyunwillid@gmail.com.

OREGON—EUGENE. Our group is looking for a full-time pediatric dentist for our very busy clinic. You will have autonomy to practice your dental philosophy, support in training of your assisting staff and our management company handles the front-end portion of the clinic. This allows you to focus on patient care and back office efficiencies. Why We Feel this Opportunity is Unique: We offer a defined two-year pathway for ownership in the clinic you work. We feel that ownership is a partnership that adds value for all parties. Our hope is that you love the practice, area and want to put down long term roots. This makes a win-win-win for the community, stability of the clinic and you. We give a lot of autonomy when it comes formula and treatment philosophy. We also have very experienced providers in our group that love to collaborate. We are adding a new building (the area is one of the top ten for new buildings in the US, planned to open in September) which will allow for more access to care which is greatly needed. We are booked out four months in advance so we are looking for a skilled, motivated, and experienced pediatric dentist. Located in Eugene/Springfield Area: The Willamette Valley is dubbed Napa North for award-winning vineyards and wineries. Our cost of living is lower compared to other states (~50%). This allows us to be. We treat the entire population. Our mix is ~50% Medicaid and ~50% private. Oregon Health Plan (OHP/Medicaid) reimburses very generously. We are looking for someone with a mixed social demographic clinic to thrive and be part of a successful group practice. We are looking for someone that adds value for all parties. Our hope is that you will love the practice, area and want to put down long term roots. This makes a win-win-win for the community, stability of the clinic and you. We give a lot of autonomy when it comes formula and treatment philosophy. We also have very experienced providers in our group that love to collaborate. activities such as hiking and biking, summers that are not-too-hot and winters that are not-too-cold, wine country, uppick farms and water sports, this is the place you want to live. The Williamette river is very friendly. Portland, the Pacific Ocean and snow skiing are all about an hour away. Big-city amenities and laid-back open countryside are all close by. This is an opportunity to get into a private practice at the ground-level, helping build it up into a group practice with multiple doctors and multiple locations. I will even gift en of our practice for helping build the practice! Mentorship would be provided in all aspects of the practice and you would be included in management discussions, with the hope that you want to enter into a partnership in the near future. All professional-related expenses are covered by the clinic, as well as a moving expense stipend and health insurance coverage. If you want to be part of building something special while filling a huge need in a great community, please visit our website at www.acorndentistryforkids.com and send an email to timrichardsondds@gmail.com. (Please no solicitors). I look forward to hearing from you soon!

**Pennsylvania—Collegeville.** We are looking for an awesome full-time pediatric dentist associate who has excellent communication and clinical skills. Please e-mail resumes to sue@akidzdentalzone.com.

**WISCONSIN—GREEN BAY.** Successful, well respected and growing pediatric dental office serving our community for over 40 years seeking a compassionate and motivated pediatric dentist. We are a private group practice of board certified pediatric dentists offering comprehensive pediatric dentistry and orthodontics to patients in a fun, family centered atmosphere. We currently have a large patient base with 100+ new patients every month in addition to our busy recall system. We are completely digital, paperless and have a well-trained team. We are seeking a full time pediatric dentist with the opportunity for partnership. Our practice is located in beautiful northeastern Wisconsin which offers
professional sporting events, year round outdoor recreation, excellent school systems, convenient art and cultural events, and a wonderful community for families. We are offering a generous starting salary with bonus potential based on production and an excellent benefits package. New residents and experienced practitioners encouraged to apply. Send letter of interest along with C.V. to julieanderson@kidsdentaledmonton.com.

WYOMING—CHEYENNE/LARAMIE. Very established practice looking for full or part time Pediatric Specialist to help. Great benefits. Top salary/commission. Requirements for this position: Must be a pediatric dental specialist. Please e-mail C.V.’s to matt@saptron.com.

FACULTY POSITION

NATIONWIDE—THE NYU LANGONE HOSPITALS. Pediatric Dentistry Residency Program is recruiting for attending pediatric dentists at its affiliated training sites in AZ-Tucson, FL, HI, MA, MO, NY, RI, TN. Responsibilities include clinical supervision, teaching, and mentoring of residents; and a limited amount of didactic teaching and mentoring. Salary will be commensurate with qualifications and experience. Requirements for this position: D.D.S./D.M.D., degree from an ADA-accredited U.S. or Canadian dental school, a certificate in pediatric dentistry from an ADA accredited program, ABPD Diplomate status desirable, a record of scholarship, and eligible for a dental license or limited permit in the state of the training site location. Note: The training sites in MA and TN may consider pediatric dentists with international dental degrees and completion of an ADA-CODA pediatric dentistry residency. As well, these sites may consider sponsorship of a work visa. Review of applications will continue until the positions are filled. In confidence, please send correspondence of interest and curriculum vitae to Dr. David Okuji at David.Okuji@NYU-LutheranDental.org.

PRACTICE FOR SALE

ALASKA—ANCHORAGE. The owner of the space in ANCHORAGE, ALASKA is a pediatric dentist and operated a well known, successful and respected specialist practice in the offered location for 30 years. The space was then occupied by a non-specialist children’s dental practice for 5 years. The space is currently available and configured for a pediatric dental and/or orthodontic practice, in a location with high demand for each. This is presented as a low to moderate risk opportunity for a new graduate or experienced professional to establish a new or expanded practice, with the space owner available to participate and facilitate as desired. Call or text 907-244-4832 or e-mail jojimblood@gmail.com

FLORIDA—CLERMONT. Ideal office space for new grad or experienced practitioner wanting to start new practice quickly, easily and affordably. Established satellite orthodontic practice looking to share or sub-lease 3400sf space. Desirable, suburban location in a growing, family-friendly community. High quality area schools. Only one other Pedodontic practice in the area. 30 minutes from downtown Orlando, Orlando International Airport and theme parks. Attractive long-term options for right person. For details on space & opportunity, contact Dr. Yurkievicz cell: (407) 760-0672 or DrYurkievicz@gmail.com

ILLINOIS—OAK BROOK/ST. CHARLES. Owner of well-established and still growing two office practice seeking to retire over next two to three years. Owner willing to stay on to facilitate and assure smooth transition. Flagship office: Oak Brook location, 2850 sq. ft., 9 operatories, (6 open bay, 3 semi private); complete renovation in 2011. Satellite office: St. Charles, 2900 sq. ft., 5 operatories, 2 each in open bays and one private operatory; well-appointed with huge waiting room. Diverse patient populations seeking optimal care including interceptive and minor orthodontics, in-office sedation, hospital and surgical center care, and special patient care. Great places to live and raise family, outstanding schools, world class shopping and dining, close to what a vibrant city offers. St. Charles office space can be purchased separately or leased. Alternately, both offices can be purchased together. Owner will consider financing. Brokers are not invited. Interested parties should send resume and letter of interest with goals to: jppenterprises@gmail.com

Rainbow® Stabilizing System

Protective Stabilization Keeps Everyone Safer

Whether you are treating a young child, or an older person with behavioral limitations, an unavoidable reality is that some patients may become unexpectedly active during a procedure. Since dentistry involves the use of sharp instruments in a small, highly vascularized area, reliable patient stability is critical for safety.

The Rainbow® Stabilizing System is a state-of-the-art protective device consisting of a colorful, breathable mesh wrap and a vinyl-covered padded board to increase patient and caregiver acceptance. The system helps to curb sudden kicking or grabbing actions that could put the patient and staff in harm’s way.
